The objective of this project is to generate sales reports for Indian restaurants operating in the UK. Below is the database's relationship diagram, accompanied by descriptions of the tables.

The dataset is in the Indian food delivery folder. The provided code is in the 'Query' file, written in SQL for MS Access. Some adjustments may be required for it to be compatible with MS SQL. Additionally, there are two reports generated in MS Access: one illustrating the popular combos sold in each restaurant, and the other consolidating the monthly sales for each restaurant.
